

**Q. Please summarize your findings with respect to the ComEd off-peak price data.**

A. ComEd provided a three-page print-out containing a list of approximately XXX transactions. Most transactions spanned off-peak hours over two days, the "on-peak hours" over the weekend, or all hours over the weekend, while some transactions were for longer periods, such as a month or a year. In the latter group, some transactions included all off-peak hours during the week, and either all weekend hours, the off-peak weekend hours, or the on-peak weekend hours. Specific transactions were randomly sampled for comparison to the PMW data for Into-ComEd transactions. Since so much of the ComEd data reflected weekends, an attempt was made, on a case-by-case basis, to adjust for PMW's lack of weekend prices, using the hourly pricing available seven days a week from the PJM. Of the XXX cases examined, the results are shown in the table and graph, below. On average, over these XXX cases, the ComEd price exceeded the adjusted PMW price by XXX, while the unadjusted PMW price exceeded the ComEd price by XXX.
